

# NeTReF

## BASIC BIOSTATISTICS & RESEARCH DESIGN BOOTCAMP

**When:** Mondays, September 28, 2020 to January 25, 2021 from 4:30-6pm (excluding holidays; refer to Fall 2020 and Winter 2021 schedule included below)

**Where:** By Zoom: Instructions to follow; it's easy.

### Who Can Participate?

This is a free course for VA-BUSM-HMS NeTReF fellows; research assistants and coordinators, post-docs, residents, VABHS employees not yet appointed faculty, and VA-BUSM-HMS faculty.

### Who's Teaching?

Jennifer Fonda, Ph.D., Assistant Professor of Psychiatry, BUSM; Lecturer of Psychiatry, HMS  
Francesca Fortenbaugh, Ph.D., Instructor of Psychiatry, HMS

**How to Register and for Questions:** Email *everyone* listed below, including Drs. Fonda, Fortenbaugh and Rasmusson (there is no registration form required)

- A) Email [Jennifer.Fonda@va.gov](mailto:Jennifer.Fonda@va.gov) and [jfonda@bu.edu](mailto:jfonda@bu.edu)
- B) Email [Francesca.Fortenbaugh@va.gov](mailto:Francesca.Fortenbaugh@va.gov) and [francescafortenbaugh@gmail.com](mailto:francescafortenbaugh@gmail.com)
- C) Email [Ann.Rasmusson@va.gov](mailto:Ann.Rasmusson@va.gov) and [ann.rasmusson@gmail.com](mailto:ann.rasmusson@gmail.com)

### Content

This 14-week course will include weekly lecture and lab components. The course will meet once a week for 90 minutes. The goal of the course is to ensure that researchers from medical backgrounds or other employees new to the fields of biomedical research and statistics have the opportunity to gain proficiency in standard analytic and research methods. This will include descriptive analyses and group-level categorical analyses up to linear and logistic regression. Research methods will cover standard experimental designs and limitations, issues related to sample characteristics, measurements (including features pertinent to data from biological samples or specific technologies), as well as critical reading and writing skills for empirical papers.

---

**Coming Spring 2021: Advanced Statistics & Research Methods Seminar** This 10 to 15-week seminar series builds on the previous course (Basic Biostatistics & Research Design Bootcamp) while encouraging greater communication and possible collaboration among experts across the VABHS campus and affiliated academic institutions. The seminar aims to include multiple learning formats including: 1) Didactic/lecture classes covering advanced statistical techniques led by researchers who actually employ these methods in their own research projects; 2) Journal club presentations to discuss/learn about recent advances and novel applications of analytic techniques in biomedical research (e.g., machine learning); 3) Community/class member presentations of research ideas or datasets and analyses for feedback.
