Defining User Experience

Definitions of User Experience

The screenshot shows the top portion of a website titled "ALL ABOUT UX". The header includes a logo with a globe, the site name, and a tagline "Information for user experience professionals". There are navigation tabs for "HOME", "ALL UX EVALUATION METHODS", "BLOG", and "ABOUT". A search bar is visible on the right. Below the header is a decorative banner with colorful, glowing circles. The main content area features a section titled "User experience definitions" with an introductory paragraph and a numbered list of eight definitions from various sources.

User experience definitions

There are many definitions for user experience. Below a pool of definitions found from the literature and on the Web.

1. All the aspects of how people use an interactive product: the way it feels in their hands, how well they understand how it works, how they feel about it while they're using it, how well it serves their purposes, and how well it fits into the entire context in which they are using it.
– **Alben (1996)**
2. All aspects of the end-user's interaction with the company, its services, and its products. The first requirement for an exemplary user experience is to meet the exact needs of the customer, without fuss or bother. Next comes simplicity and elegance that produce products that are a joy to own, a joy to use. True user experience goes far beyond giving customers what they say they want, or providing checklist features. In order to achieve high-quality user experience in a company's offerings there must be a seamless merging of the services of multiple disciplines, including engineering, marketing, graphical and industrial design, and interface design.
– **Nielsen-Norman Group**
3. The overall experience, in general or specifics, a user, customer, or audience member has with a product, service, or event. In the Usability field, this experience is usually defined in terms of ease-of-use. However, the experience encompasses more than merely function and flow, but the understanding compiled through all of the senses.
– **Shedroff**
4. Every aspect of the user's interaction with a product, service, or company that make up the user's perceptions of the whole. User experience design as a discipline is concerned with all the elements that together make up that interface, including layout, visual design, text, brand, sound, and interaction. UE works to coordinate these elements to allow for the best possible interaction by users.
– **UPA**
5. User eXperience (UX) is about how a person feels about using a system. User experience highlights the experiential, affective, meaningful and valuable aspects of human-computer interaction (HCI) and product ownership, but it also covers a person's perceptions of the practical aspects such as utility, ease of use and efficiency of the system. User experience is subjective in nature, because it is about an individual's performance, feelings and thoughts about the system. User experience is dynamic, because it changes over time as the circumstances change
– **Wikipedia**
6. User Experience (abbreviated: UX) is the quality of experience a person has when interacting with a specific design.
– **UXnet.org** and **Interaction-Design.org**
7. A result of motivated action in a certain context. User's previous experiences and expectations influence the present experience; this present experience leads to more experiences and modified expectations.
– **Mäkelä & Fulton Suri (2001)**
8. A consequence of a user's internal state (predispositions, expectations, needs, motivation, mood, etc.), the characteristics of the designed system (e.g. complexity, purpose, usability, functionality, etc.) and the context (or the environment) within which the interaction occurs

Usability: ISO Definition

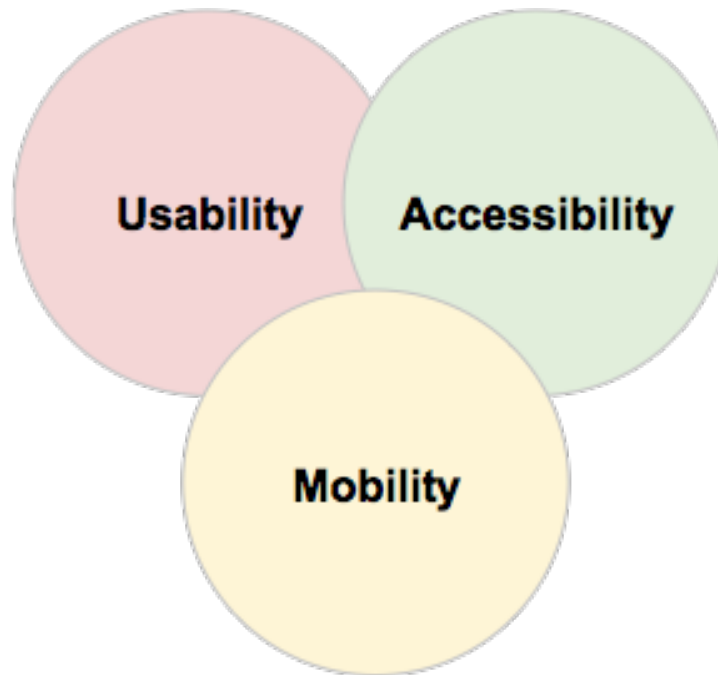

“The extent to which a product can be used by specified users to achieve specified goals with effectiveness, efficiency and satisfaction in a specified **context of use.**”

| | |
|-----------------|------------------------------------|
| Product: | Harvard Key |
| Specified user: | Harvard Student |
| Specified goal: | Setup 2-step authentication |
| Effectiveness: | Student is successful |
| Efficiency: | Two minutes or less |
| Satisfaction: | Student is happy |
| Context of use: | Registering for a course |

User Experience Encompasses the Entire User Journey

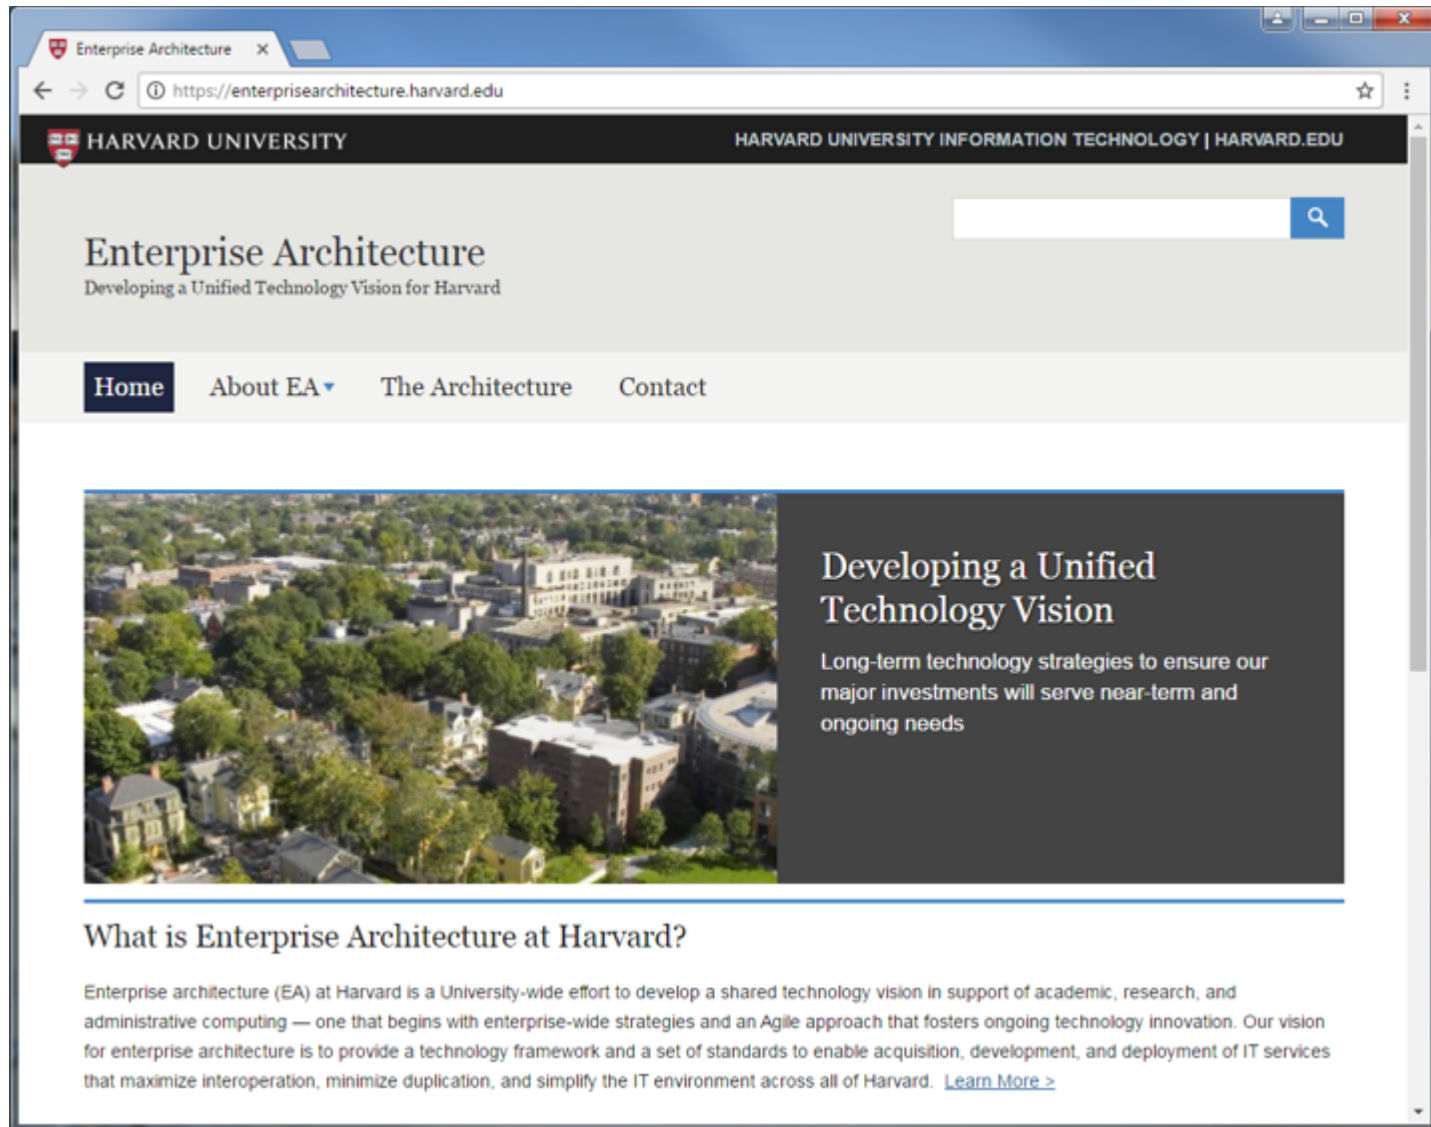

Defining User Experience at Harvard

The totality of an end-user's perceptions as they interact with a product or service, across all channels and devices, for all users.

The screenshot shows a web browser window with the URL <https://enterprisearchitecture.harvard.edu>. The page header includes the Harvard University logo and the text "HARVARD UNIVERSITY" and "HARVARD UNIVERSITY INFORMATION TECHNOLOGY | HARVARD.EDU". The main heading is "Enterprise Architecture" with the subtitle "Developing a Unified Technology Vision for Harvard". A navigation menu includes "Home", "About EA", "The Architecture", and "Contact". A large image of a Harvard campus building is shown on the left, and a dark grey box on the right contains the text "Developing a Unified Technology Vision" and "Long-term technology strategies to ensure our major investments will serve near-term and ongoing needs". Below this is a section titled "What is Enterprise Architecture at Harvard?" with a paragraph of text and a "Learn More >" link.

Developing a Unified Technology Vision

Long-term technology strategies to ensure our major investments will serve near-term and ongoing needs

What is Enterprise Architecture at Harvard?

Enterprise architecture (EA) at Harvard is a University-wide effort to develop a shared technology vision in support of academic, research, and administrative computing — one that begins with enterprise-wide strategies and an Agile approach that fosters ongoing technology innovation. Our vision for enterprise architecture is to provide a technology framework and a set of standards to enable acquisition, development, and deployment of IT services that maximize interoperation, minimize duplication, and simplify the IT environment across all of Harvard. User Experience Principle #1

Prioritize user impact in developing and selecting tools

What this means:

Understand your users and their needs and make that a priority for design decisions.

User Experience Principle #2

Optimize for the entire user journey and experience

What this means:

Ensure that all touchpoints of the user journey are optimized for a great user experience across all channels and devices for all users.

User Experience Principle #3

Incorporate user feedback throughout the process

What this means:

Continually test designs with users to ensure effectiveness, efficiency, and satisfaction

User Experience Principle #4

Ensure the accessibility and mobility of products

What this means:

Make interactive systems equally operable by all:

- **Regardless of circumstances or limitations**
- **On all common devices (computer, laptop, tablet, phone).**
