

Orion Nebula ■ M42
Hubble Space Telescope ■ ACS/WFC

WorldWide Telescope

is a FREE Universe Information System
created at Microsoft Research, in Redmond, Washington.

To try out the **WorldWide Telescope** shown to you by Professor Alyssa Goodman at Harvard today, go to **worldwidetelescope.org** If you have a Windows computer, you can download the full program there.

On a Mac, go to **worldwidetelescope.org/webclient**

If your Mac then asks you to "Download Silverlight," go ahead and say yes. (If you or your family uses Netflix on that same computer, you probably already have Silverlight.)

To learn more about the **WorldWide Telescope Ambassadors Program**, where scientists come to schools to use WorldWide Telescope in classrooms and after school programs, visit **wwtambassadors.org**

Professor Alyssa Goodman's Seamless Astronomy Group collaborates with WorldWide Telescope's creators at Microsoft

Research. She and other astronomers use, and help create, WorldWide Telescope and plenty of other cool software in their scientific investigations of the Universe!
